WHAT DID THE PANDEMIC CHANGE?

- Covid-19 forced humans to live in silos for over 2 years, debarring them to enjoy leisure in a physical set-up
- Remote and hybrid work culture has added to the problem as people find themselves scattered and alone moving in a new city
- As a result, the willingness to attend a live show or liking towards artists is there, but there is hardly anyone to tag along who have similar music tastes

WHAT ARE PEOPLE SAYING ABOUT IT?

"I've shifted to Gurugram this year. My office operates in hybrid mode (2 days WFO compulsory). I'm a huge Bollywood music fan and attended all live professional events while in college. Feels like I'm stuck alone in this new city with no real friends to go out with and enjoy these events."

Sid, 23M^[8]

Rimen, 29F^[9]

"I attended the Coldplay concert in the US where I was working. I used to go alone and made on friends during the event and had some good memories. After coming back to India, I really have to head hunt the right kind of people to attend these events with."

SPECIFYING PROBLEM STATEMENT

The real essence of attending a live music event or a concert comes from good company of friends. It caters to the most **fundamental human need for enjoying leisure - To feel belonged**. But in the post covid world of increased solitude, people find it challenging to find the right company to enjoy such live events with.

POTENTIAL IMPACT OF THE PROBLEM WE ARE SOLVING

UNDERSTANDING TARGET USERS BETTER

What makes life difficult?

Aviral ^[1]
(Music enthusiast)

- Works in hybrid setting
- Very **passionate about music**
- Huge fan of **Indie Music** and related genre

Recognises limited professional network

Selects certain artists to attend their live shows

Desire to enhance **industry** connections and knowledge

Overwhelmed with huge crowds

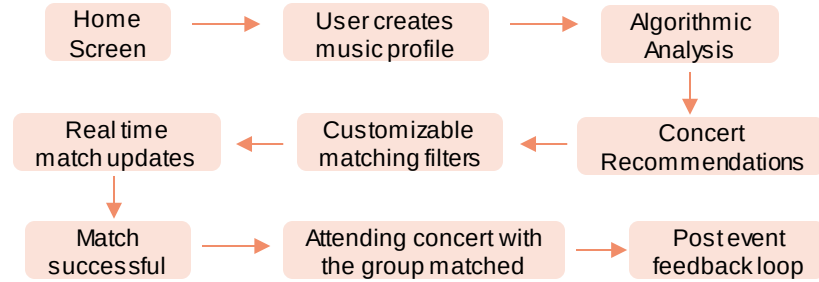

Not allowed to meet the artist

Couldn't figure out the right people to network with

SOLUTION: MelodyMate – It is a new app that transforms the way people experience live music ensuring every show is not just a musical event, but a meaningful social and connective experience. It has 4 different releases:

SOLUTION A: Harmony Match

This feature matches music enthusiasts based on their genre preferences by mapping their appreciation for certain artists and type of music, to help them attend a concert together

Technical Design

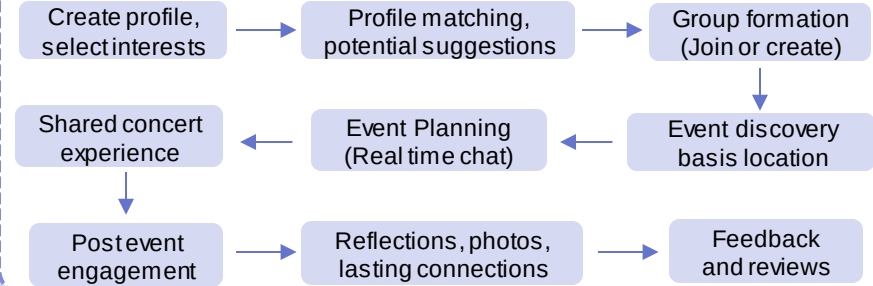

Pain Points Addressed

- Aviral can easily discover Indie music fans on the app based on his likes and preferences.
- He no longer has to rely on his existing to group friends to attend concerts with.

SOLUTION B: Meet and Greet

This feature facilitates new connections to create shared experiences for individuals through live music events and concerts, to potentially make long lasting friendships and memories.

Technical Design

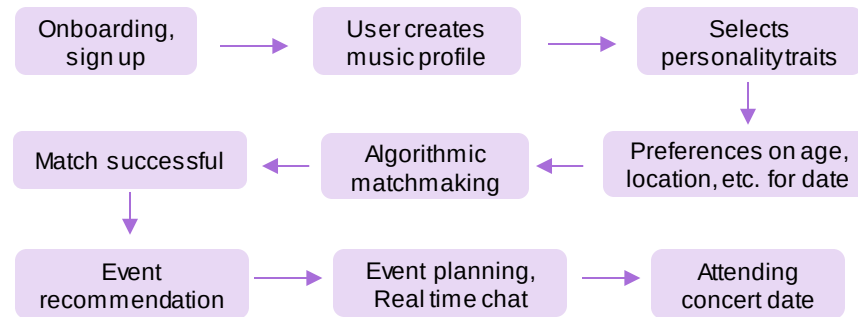

Pain Points Addressed

- Riya can now get rid of monotonicity of work and step out to connect with new people at some live music events
- She might also end up having some long lasting and meaningful friendships, through post event engagement activities.

SOLUTION C: Heart Sync

This feature helps individuals find a potential date partner at an upcoming live music event. The shared interest in specific artists and music is kept as the primary basis of matchmaking. Other secondary parameters includes personality traits and life interests.

Technical Design

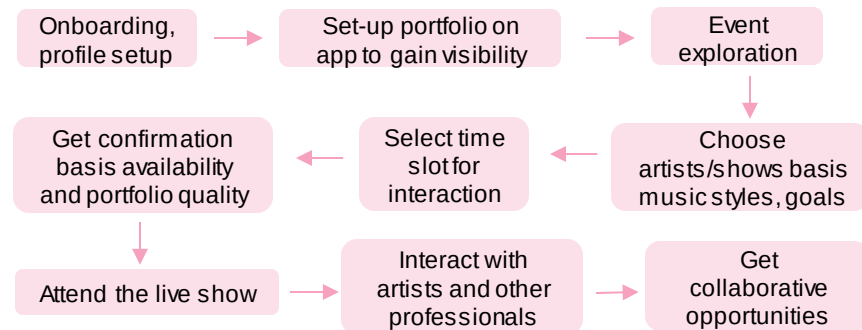

Pain Points Addressed

- Yash will no longer feel lonely and isolated, and can go out to attend live music events and concerts with his match
- He can now rely on the app's matchmaking algorithm to cater him with potential date opportunities

SOLUTION D: Bridge Beats

This feature will enable struggling music professionals to turn their aspirations into reality by helping them network with artists/musicians and other professionals at live concerts and shows. They can also leverage these connections to tap on potential collaborative opportunities in future.

Technical Design

Pain Points Addressed

- Karan can attend concerts and shows that align with his music styles and long-term goals in music industry
- He can now expand his professional network by interacting with industry professionals to foster his career growth.

IDENTIFYING OUR PRIORITY USER

Target User	Market share	Market Growth	# Psychological pain points	Entry barriers
Aviral (Music enthusiast)	MEDIUM	MEDIUM	3	MEDIUM
Riya (Casual Fan)	HIGH	HIGH	4	MEDIUM
Yash (Socialiser)	HIGH	HIGH	4	HIGH
Karan (Music Professional)	LOW	LOW	4	HIGH
Rationale:	Research Data	Market trends	Psychographic analysis	Qualitative Score

WHICH PAIN POINTS SHOULD WE SOLVE IN MVP?

Parameter/Solution	Harmony Match (A)	Meet & Greet (B)	Heart Sync (C)	Bridge Beats (D)
Pain Points addressed	Tough to meet people with similar music preference	Wants to get out of the monotonicity of work and socialise	Feels isolated. Looking for potential date partner	Wants to network with industry professionals and musicians
# users reached	▲ ▲	▲ ▲ ▲ ▲	▲ ▲ ▲	▲
Impact per user	▲ ▲ ▲	▲ ▲ ▲ ▲	▲ ▲ ▲	▲ ▲ ▲ ▲
Effort/Cost to implement	▲ ▲	▲ ▲	▲ ▲ ▲	▲ ▲ ▲ ▲
Potential ARPU	▲	▲ ▲	▲ ▲ ▲	▲ ▲ ▲ ▲
Prob. of success	▲ ▲ ▲	▲ ▲ ▲ ▲	▲ ▲	▲
Net Result	Phase 1	MVP	Phase 2	Phase 3

Qualitative analysis is for prioritization:

- # users reached:** Highest market for people who just want to socialise (casual fans) over a music show, than people who are music enthusiasts, or people who are looking for a date.
- Impact per user:** Highest impact on casual fans as it is a novel idea catering the most common pain point of “meeting new people”. For music professionals, it would foster their career by huge extent.
- Effort to implement:** For music enthusiasts, it is operationally tough to connect them with big artists. Dating during live shows also raises safety concerns.
- Potential ARPU:** Music professionals are easily monetizable as their career upside can be very high; followed by singles who are looking to date.
- Prob. of success:** Highest market for casual fans and music enthusiasts with high ease of implementation increases their odds of success.

MEASURING SUCCESS FOR THE ALL FEATURES

	Discovery	Adoption	Repeat Usage	Monetization
Harmony Match	# Home page view s - CTA clicks - Home screen to “create music profile” conversion	# of music profiles created per user # of successful matches per user # concerts attended per user # conversions in actual meet ups during concert	# of daily and monthly active users % returning on home page per day - Churn rate	- Avg. revenue per match per user - Avg. revenue per user per booking (via app)
Meet & Greet	# Home page view s - CTA clicks - Home screen to “create profile” conversion	# profiles created # successful profile matches per user # Groups joined or created per user # users per group # conversions of groups in actual meet ups during concert	# Groups going for concerts more than once % returning on home page per day - Churn rate	- Avg. revenue per group (via bookings on app). - Avg. revenue per group (for group formation) - Avg. revenue per user (via bookings on app)

PITFALLS AND WORK-AROUNDS

Harmony Match	
- Not enough number of users to form groups with similar music preferences - Less users for niche preferences	- Prompt users with push notifications to choose genres and be part of a group - Ask for alternative preferences
Heart Sync	
- Safety issues to meet random guy/girl - Awkward moments during the concert	- Two layered verification of all profiles - Push some cues to talk about on app

Meet & Greet	
- Group members don't show up during meet ups - Groups are formed, but die out fast	- Show pop-ups for high no-show rate before enrolling for next event - Send updates for upcoming events
Bridge Beats	
- Operational issues from events team - Artists too busy to meet after concert	- Partner with trusted organizers only - A slot, free of cost for some other artist
