

GrowwCase – Small case for Crypto

Context:

India has more than 100 million^[1] retail investors in Cryptocurrency. There's no **smart** and **structured way** to go about crypto investments. It is reasonable to assume that less than 10%^[2] of crypto investors in India are actually aware of the technicalities and complexity of the crypto ecosystem. Clearly, the existing systems in place are not impactful to tackle this in the current landscape.

Specifying the problem:

With more people wanting to invest in digital assets post covid, there is a huge gap in meaningful **discovery** and education of crypto investment products, as a result of which, the majority of retail investors find it **tough** to invest in cryptocurrency.

Reason to choose this problem:

This problem sits at the intersection of two extremely important levers of the current financial landscape in India: **Investment awareness** and **digitalization of currency**. One is the “need of the hour”, the other is “new age of transactions”. The scale at which this problem can be solved is huge and hence it becomes an important one to prioritize.

Potential Impact:

- Business opportunity of **1000 cr market** (Primary level impact)
- High retail investments in digital assets can foster economic growth via increased capital formation and diversified portfolios, leading up to more open and accessible financial markets. (Secondary level impact)

Understanding target users:

Siddhant, 46M

Self-employed, well to do business man, “**extremely busy**”, finds tough to find time to manage his portfolio, looking to diversify his portfolio apart from mutual funds and real estate, “**apprehensive**” about the “**high volatility**” of crypto world

Rimen, 25F

Fresher software engineer, knows power of compounding, “**Lacks understanding**” of complex crypto world, looking to take some good investments bets early on in career, “**fears**” that she’ll lose money given “**high risks**” attached to crypto market

- Identifying priority user:

Target user	Market size	Spending Power	Growth opportunity	Entry Barriers
Lacks Time and fearful (Siddhant)	Low	High	Medium	Medium
Lacks understanding and fearful (Rimen)	High	Medium	High	Medium
Reasoning:	Research Data ^[6]	Deductive logic	Market Trends ^[7]	Qualitative Score

Solution:

GrowwCase: It is a modern investment product that aims to democratize access to cryptocurrency in a hassle-free manner. It is a group of coins bundled together basis an idea, theme or risk appetite, managed by experts as a single asset (a basket) to minimize need of understanding and monitoring individual cryptocurrencies.

• User Flow:

• Technical Design:

• Monetization Model:

- “1-10 revenue model” can be adopted.
- 1% of the initial principal amount can be charged as “**management fees**” from the users.
- 10% of the net returns can be charged as “**performance fees**” in case of positive returns.
- No performance fees in case of negative returns of the coin basket.

• How does the solution address pain points:

- Smart discovery: Baskets of crypto coins reflecting certain ideas eases the cognitive effort (and hence time) required to understand individual coins before investing.
- Reduced risks: Thematic Baskets with multiple coins diversifies portfolio, moving away from risky single coin investments.

Launch Plan (GTM Strategy):

- Top level view

Parameters	Pre-launch	Launch	Post-launch
Goal:	Acquisition	Growth	Scale
Timeline:	3 months	1 month	3 months
KPI:	1000 users, 10 experts	10,000 users, 50 experts	1,00,000 users, 100 experts

- Actionable steps

Factors	Activity	Rationale
Type of launch	Limited roll out (Beta release)	For quick iterations on user feedback and to push relevant changes thereafter
Who to target first?	Young workforce (22-30 years of age)	High market size ^[8] , high growth opportunity post launch, High risk appetite
Where to launch?	Delhi/Bangalore	Research data ^[9] basis crypto adoption rate
When to launch?	During a significantly stable market	Unstable markets or economic downturns have negative impact on investments.
Acquisition Campaigns	1. Onboarding campaign 2. Lifetime Referral campaign	1. Onboarding: To nudge initial set of users 2. Lifetime referral: To target early retention
Distribution Channels	1. Organic : Blogs, Emails, social handles, video content 2. Paid : Instagram/Facebook ads, Sponsored posts, Google ads	1. Organic: LinkedIn blogs, Emails of waitlisted users, short form informational video content 2. Paid: Ads on all socials, websites with high traffic. Suggested- post launch at scaling phase.
Partnerships	Partner with crypto experts, crypto exchange platforms	Experts: Responsible for curating baskets. Exchange firms: Responsible for custody of coins.

Metrics to evaluate success:

	Discovery	Adoption	Repeat usage	Monetization
Metrics:	1. # of page views, CTA clicks per user. 2. # of profile verifications done per day.	1. Avg session time per user. 2. # of themes searched per session per user. 3. # of baskets invested per user 4. Avg principal amount per basket per user	1. # of daily and monthly active users. 2. % users returning per day 3. Churn rate	1. # of transactions done per day. 2. Avg revenue per basket 3. Avg revenue per user per transaction

Potential pitfalls and workarounds

- **Delayed rebalancing:** of coins can lead to large false investments in this volatile market
- **Regulatory Risks:** Changes in regulations can impact legality and value of certain coins.
- **Security concerns:** Crypto exchanges and wallets are highly vulnerable to cyber-attacks.

- A highly robust tech infrastructure should be adopted to avoid even slight latency.
- Keeping an eye, and push immediate notifications to experts and users to act accordingly.
- Partner with well-established crypto exchanges like Binance to secure wallets.
